

GIGA VU SONIC Supported RAW Formats

GIGA VU SONIC supports and displays the most number of RAW image formats in a portable storage device. Unlike our competitors which only display the embedded JPEG within the RAW image, we decode the actual RAW file. GIGA VU SONIC unique hardware RAW decoder allows it to quickly decode and display virtually any RAW image format including the following:

- Canon .CR2 .CRW .TIF
- Fujifilm .RAF
- Konica Minolta .MRW
- Leica .DNG .RAW .RW2 .RWL
- Nikon .NEF .NRW
- Olympus .ORF
- Panasonic .RAW .RW2 .RWL
- Pentax .DNG .PEF
- Samsung .DNG
- Sigma .X3F
- Sony .ARW .SR2

In addition, GIGA VU SONIC is currently the only portable device in the world that can display professional medium format raw images from Hasselblad, Leaf, Mamiya and Phase One.

- Hasselblad .3FR
- Leaf .MOS
- Mamiya .MEF
- Phase One .TIF

We are working to implement display support for more RAW image formats in future firmware updates.

Contact us if your RAW image format or camera model is not listed above.

Even if your RAW image format is not listed above, GIGA VU SONIC will still be able to backup, store and see the filename in the file explorer, it just will not display the image on the built-in LCD.
